

➔ Cover Image

In this retrospective observational study, Dr. Alicia M. Zha et al. investigate outcomes in patients with stroke who were followed remotely by a teleneurology neurohospitalist compared to patients followed in-person by a neurohospitalist. Stylized by Kaitlyn Aman Ramm, Senior Digital Multimedia/Graphics Coordinator.

Our goal is to assess different aspects of neurologic practice in diverse settings. Evidence-based medicine is the gold standard for medical decision-making. However, several additional factors can affect medical decisions. Insufficient evidence, access to treatments, and community acceptability can have a high impact on neurologic day-to-day decisions. Our surveys are not intended to test medical knowledge but to be used as a lens to real-life neurologic practice.
