involvement likely including the thalami bilaterally to also account for her coma. Furthermore, if these lesions were indeed present, they would likely be picked up on CT scan, given that her symptomatology was progressive for 3 days prior to obtaining the study. Based on our experience, the clinical recovery began too rapidly for metabolic encephalopathies causing changes in the basal ganglia.

**CORRECTION**

Treating patients with medically resistant epilepsy

In the article “Treating patients with medically resistant epilepsy” by Gregory L. Krauss and Michael R. Sperling (*Neurology® Clinical Practice* 2011;1:14–23), there is an error in the second to last line in table 3. “Corpus callosotomy (anterior 66% to 80%)” should be listed as another bullet point under treatment for “Severe symptomatic forms of epilepsy” below “Third-line adjunctive therapies.” The publisher regrets the error.
CORRECTION: Neurogenetics: Five new things
