The revolution of practice

As practicing neurologists, we are continually seeking ways to produce better outcomes for our patients by providing the most efficient and effective health care possible. In this issue of *Neurology: Clinical Practice*, we feature 3 Eye on Practice articles dedicated to navigating the changing landscape of health care delivery and payment.

The reemergence of the patient-centered medical home model for coordination of patient care prompted an evaluation by the American Academy of Neurology of the neurologist as a “medical home neighbor” (p. 134). An article by Hoch et al. provides guidance on this opportunity for us to remain an important part of care of patients with neurologic disease.

Adoption of an electronic health record (EHR) is important not just to avoid a penalty, but also to assist in producing data to survive in this new health care environment. A second article by Weathers and Esper offers advice on how to select and implement a successful EHR (p. 141).

The tsunami of social media is encouraging as an outreach tool to improve communication, but is daunting on the privacy front. The third article in Eye on Practice by Potts and Hohler advances practical advice on using this important tool successfully and with appropriate caution (p. 149).

We welcome your feedback on these articles and seek your own practical, real-world experience on how you face these new opportunities and challenges. We will publish the most innovative advice on keeping up with the practice revolution in an upcoming edition of “The Nerve!”

A handwritten signature in black ink, reading "John R. Corboy". The signature is fluid and cursive, with the first letters of the first and last names being capitalized and prominent.
