Discover our content and keep your practice current

Over the past 5 years, *Neurology: Clinical Practice* (NCP) has strived to evolve from a useful peer-reviewed resource for the practicing general neurologist to an indispensable point-of-care tool both for the general neurologist and the subspecialist in practice seeking to optimize patient care. While we anticipated being well-received by our US audience, we have been surprised and heartened by our international reach.

The data tell us that readers increasingly are discovering our content through targeted searches on the Web. We have reclassified our content so that however you reach an article in NCP, you will know what you're getting: Research, Review, Commentary, or Case. We have also introduced structured Abstracts for Research and Review articles and encouraged our authors to provide take-home points for the reader.

A new feature led by Section Editor Luca Bartolini, MD, encourages sharing of best practices among our readers (see the Editorial on p. 14 for details). “*Practice Current: An interactive exchange on controversial topics*” was designed to offer a unique perspective on how neurologists at different stages of their careers and in different areas of the world approach the same clinical scenario.

As Drs. Bartolini and Millichap observe, “There is no single correct answer to the clinical questions presented in *Practice Current*; instead, this is an opportunity for the readers to share their experience, learn from each other and from the experts, and potentially build consensus.”

As always, we welcome your feedback on this issue and invite suggestions for improving NCP.

A handwritten signature in black ink that reads "John R. Corboy".

John R. Corboy, MD, FAAN
