DISEASE ACTIVITY AND PERMANENT DAMAGE

Even a flicker of disease activity can have potentially substantial consequences for MS patients. In MS, clinical and subclinical disease activity can occur early in the disease course and persist throughout the disease.1-3

KEEPING FUTURES BRIGHT

Continued research on the MS disease course is shining a light on important considerations, and new questions are rising to the surface.

IF SUBCLINICAL ACTIVITY IS NOT ADDRESSED EARLIER IN THE DISEASE COURSE, WHAT ARE THE CLINICAL CONSEQUENCES?
